

COURSE NAME: DATABASE MANAGEMENT SYSTEM

Course Objectives

1. Learn database design, relational model, and SQL.
2. Master the mathematical concept of Relational Algebra.

Unit 1: Relational Model and algebra

Relational Database Architecture and Concepts

Relational Algebra Selection and Projection Operators

SQL Select Queries and Joins

Normalization and Functional Dependencies

Course Outcomes

CO1: Design and implement relational schemas.

Programme Outcomes

PO1: Apply engineering knowledge to analyze complex problems.

Programme Specific Outcomes

PSO1: Build professional data science solutions.

Reference Books

1. Silberschatz, Korth, Sudarshan - Database System Concepts, McGraw Hill.
